

SUPERSEDE

Marine Board

The Future of Plywood - Sustainable, Waterproof, Ultra-Durable

Supersede Marine Board is the world's first true 1:1 replacement for marine-grade plywood, delivering the strength and workability professionals expect while eliminating the weaknesses of wood.

Designed for demanding marine and outdoor environments, it is 100% waterproof, fully recyclable, and made from recycled post-industrial plastics.

Supersede Marine Board – Fiberglass Boat Applications

Application	Traditional Material (Plywood/OSB)	Supersede® Advantage
Stringers	Prone to rot, delamination, swelling	100% waterproof, no rot, long-term structural integrity
Decking	Water absorption, splintering, sealing required	Durable, smooth finish, no sealing needed, safe underfoot
Bulkheads	Can mold/mildew, requires treatment	Rot- and pest-proof, dimensionally stable
Partitions	Inconsistent quality, inconsistent weight	Consistent weight, density, and thickness
Transom cores	High failure rate due to rot/moisture	Waterproof, high screw retention, reliable mounting surface
Cabin soles / subfloors	Needs chemical treatment, prone to warping	Formaldehyde-free, no off-gassing, stable in humidity
Furniture bases	Inconsistent strength	Uniform sheet properties, smooth finish for laminates
Hatch covers / lids	Susceptible to water damage, splintering	Lightweight, waterproof, easy to machine
Engine box covers	Heat + vibration degrade plywood	Strong, impact resistant, can be combined with sound/heat insulation
Generator / battery mounts	Moisture weakens fasteners	Excellent fastener retention, vibration resistant
Swim platform cores	Rot and delamination risk	Fully waterproof, long lifespan
Compartment liners / storage	Sealing required, absorbs odors	Easy to clean, waterproof, odor-resistant
Gunwale reinforcement	Rot under fittings, requires sealant	Secure screw retention, no sealing required
Console bases / helm stations	Heavy, sealing needed	Stable platform for electronics and steering
Hardtop / T-top cores	Risk of delamination	Strong, waterproof, no structural breakdown

Key Advantages

- Direct replacement for marine plywood in structural, wet-area, and outdoor use
- Fully waterproof, rot-proof, splinter-proof, and termite-resistant
- Superior fastener retention, impact resistance, and dimensional stability
- Compatible with epoxies, glues, veneers, laminates, foam flooring, and carpet
- Uniform sheet quality for minimal waste and efficient assembly
- Safe to handle – no splinters, toxic fumes, or harmful chemicals

SUPERSEDE utilizes recycled feedstock and advanced material science to create durable, high-performance boards. Its proprietary blend ensures superior strength, meeting rigorous standards for a reliable, sustainable solution.

SUPERSEDE boards are precision-extruded for uniform, high-tolerance panels, ensuring seamless installation. Unlike wood, they resist warping, twisting, and thickness variations, guaranteeing consistent quality.

Why It Stands Out

- **Structural Integrity** - Matches marine plywood in form and function without warping, swelling, or delamination
- **Eco-Friendly & Circular** - 100% recyclable and free of adhesives, VOCs, and harmful compounds
- **Low Carbon Impact** - Only 10% of the CO₂ emissions of marine plywood manufacturing
- **Award-Winning Innovation** - IBEX Innovation Award for Boatbuilding Methods and Materials

AVAILABLE SIZES (available in custom sizes upon requests)

4' X 10'

4' X 9'

4' X 8'

Thickness:
1/2 inch (12.7mm)
5/8 inches (15.87mm)
3/4 inches (19.05mm)

Width:
48 inches (1219mm)

Lengths:
96 inches (2438mm)
101 inches (2565mm)
120 inches (3048mm)

SUPERSEDE Marine Board
Smarter, Greener, Stronger.
